Inflatable sealing ring product description

Professional manufacturer and supplier of inflatable sealing rings

Product Description of the inflatable seal

Product principle: · Compressed air is injected into the sealing ring through the nozzle connector to control the expansion and contraction of the sealing ring to form a seal.

Sealing effect:

·By adjusting the compressed air pressure, the product stroke can be controlled to achieve controllable and adjustable sealing.

Product material:

· Supports EPDM, silicone rubber, phenyl silicone rubber, and fluorosilicone rubber.

Precautions when using:

· Apply a pressure of 0.1MPa and gradually increase until the seal is formed. Then compensate with an additional 0.05MPa. The product can withstand up to 1.2MPa.

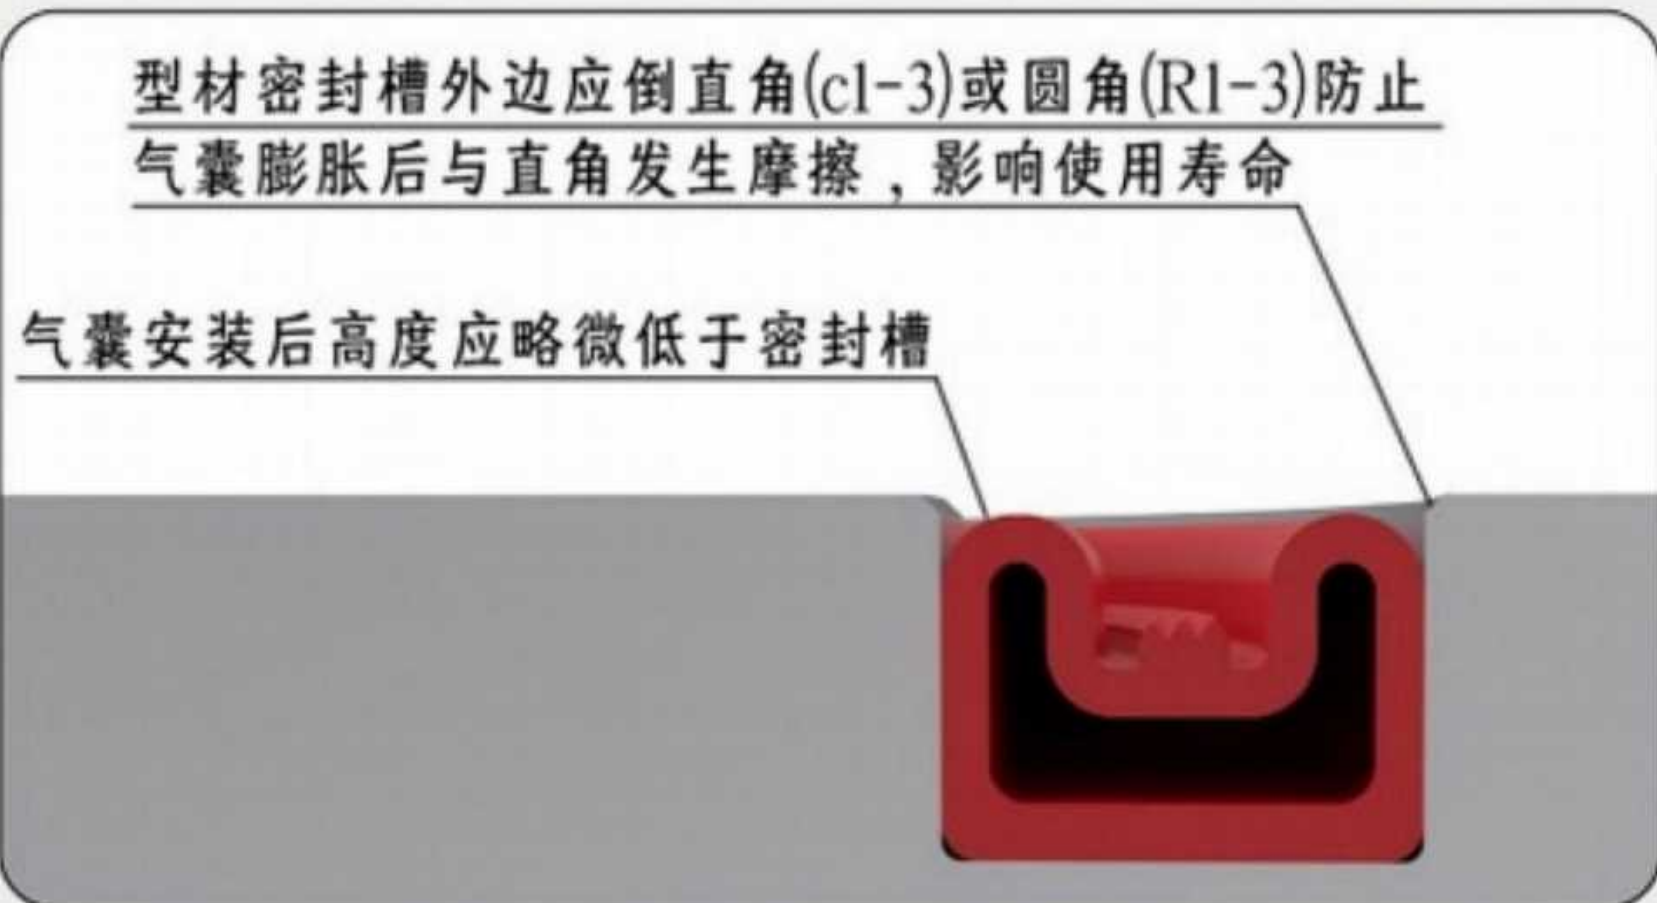

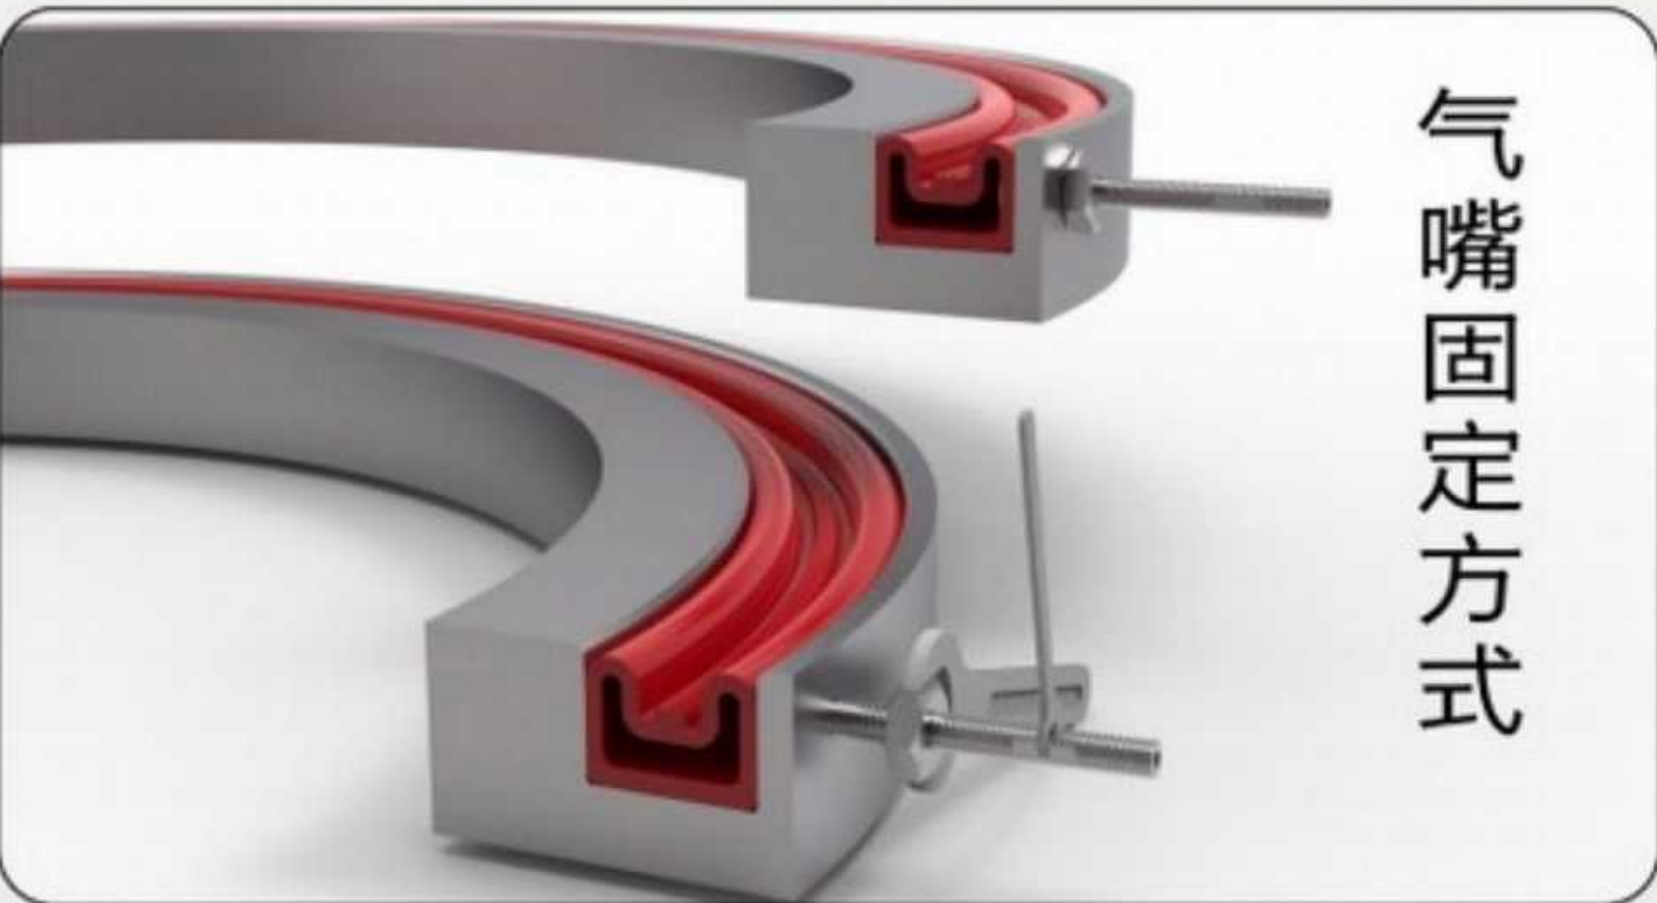

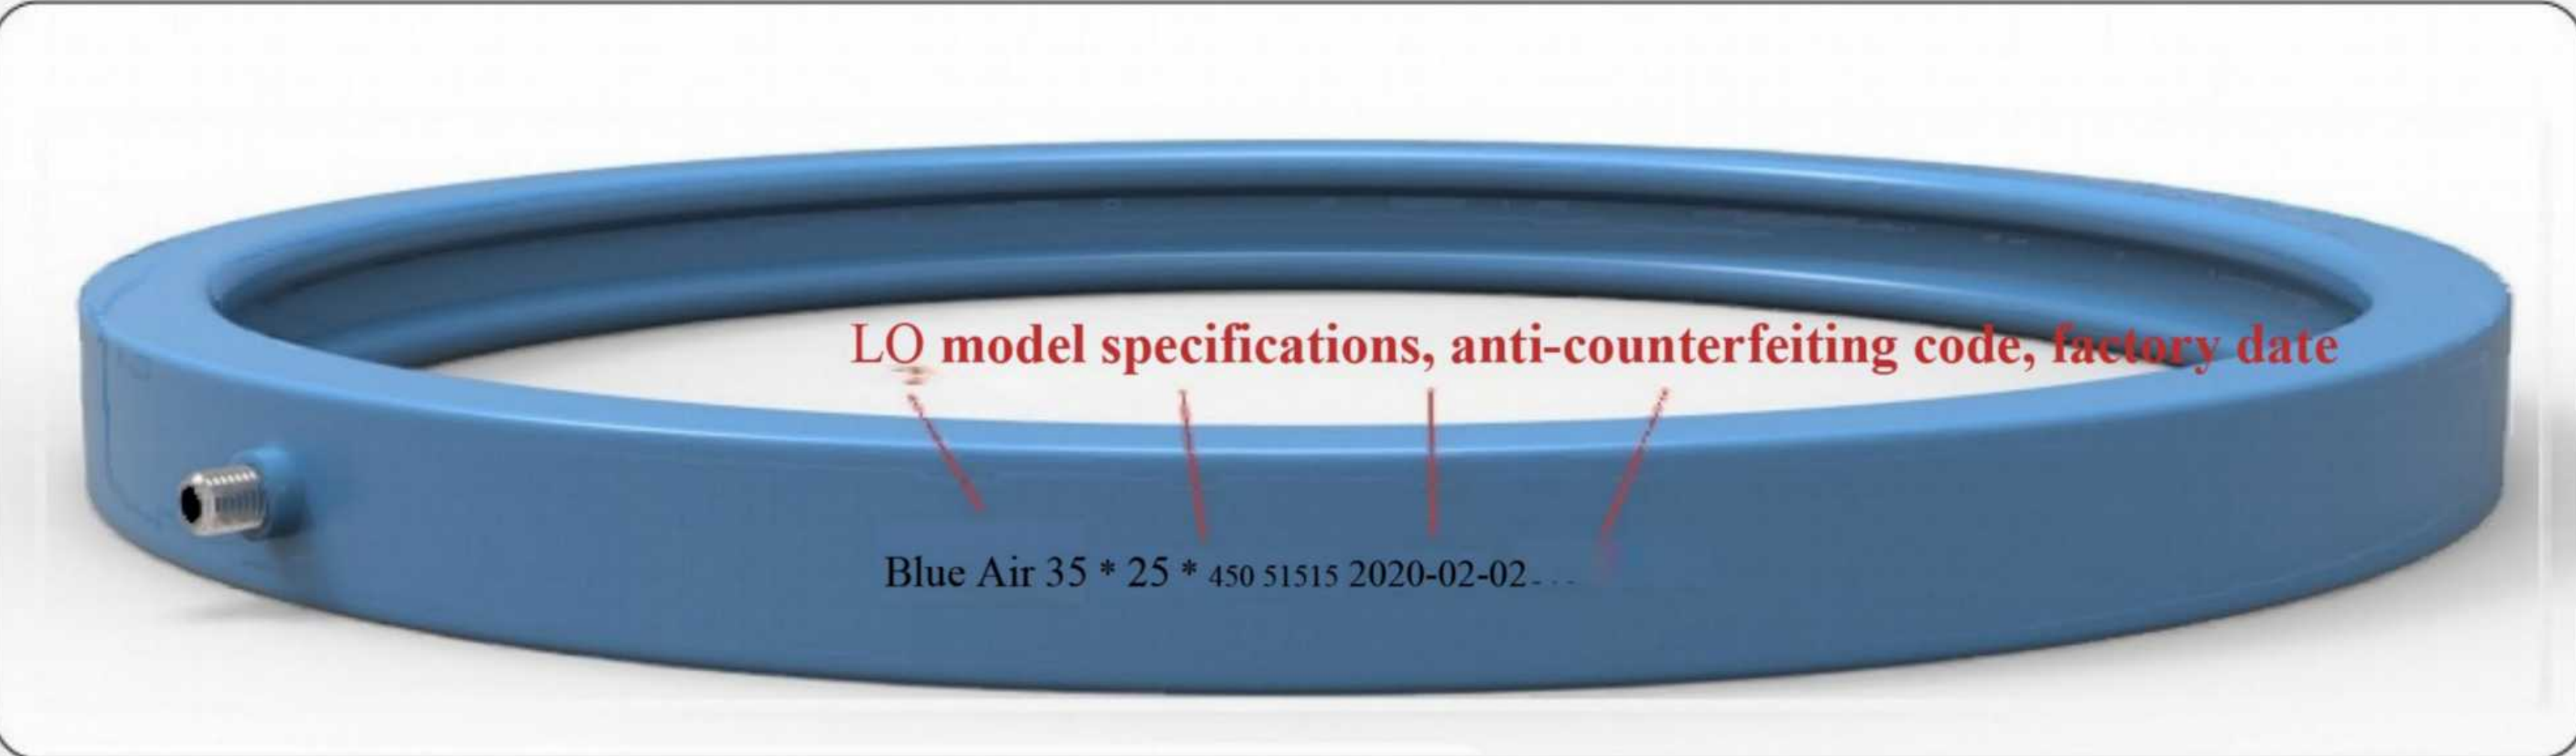

Customization Notes:

- 1. Seal gap
- 2. Slot size
- 3. expansion direction
- 4. Interface Requirements
- 5. Operating conditions

Based on the above five parameters, we will design the product

Create shapes and provide detailed 3D drawings!

Warranty period: · If there is leakage at any position of the product joint or air nozzle, the product will be repaired or replaced free of charge within one year according to the date of the product.

Way to Install

Professional manufacturer and supplier of inflatable sealing rings

Installation method

Gas Source Interface and Installation

Professional production and design supplier of inflatable sealing ring

Air source interface and installation

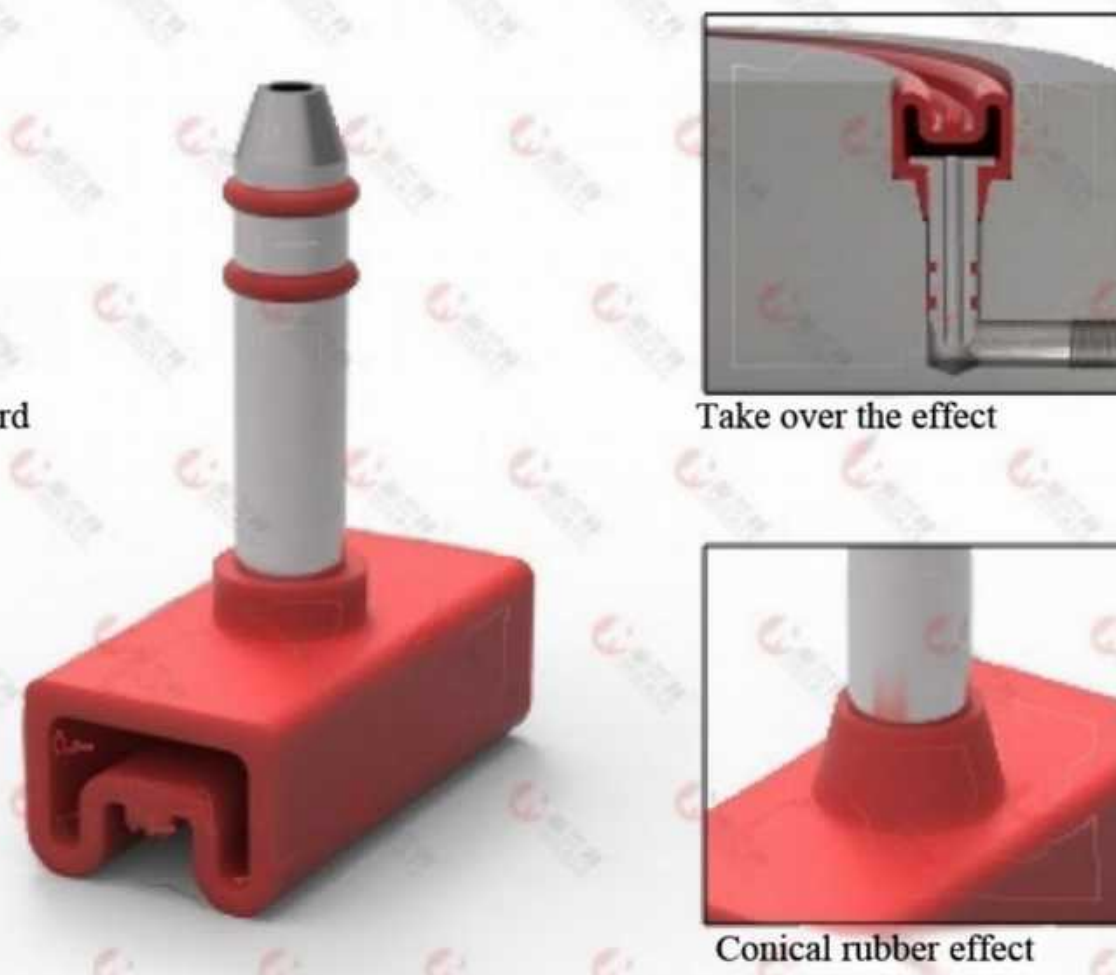

Gauge

Cable material: silicone

Single

Metal: 316/430/copper
Thread: Imperial/Standard

Fast Lock

Metal: 316/430/copper
Thread: Imperial/Standard

Quick Connect

Metal: 316/430/copper
Thread: Imperial/Standard

Secure

Metal: 316/430/copper
Thread: Imperial/Standard

Pagoda

Metal: 316/430/copper
Thread: Imperial/Standard
